

More Than Half Of The British Empire Lies In Territory East of Suez

In a great arc around the Indian Coast from the South Atlantic to the South Pacific lies more than half of the British Empire.

South Africa, Northern and Southern Rhodesia, the East African territories, Palestine, India, Ceylon, Hong Kong, Malaya, East Timor, Australia and New Zealand—all these continents of the Commonwealth form a semi-circular arc of empire, vast but not unwieldy, which can be organized on a co-operative basis.

The appointment of the Robert Brooke-Popham as Commander-in-Chief in the Far East portends a policy of organizing the Eastern Hemisphere for a more intense prosecution of the war.

South Africa's industries are also one of the great, industrial countries and with the naval authorities in China and East Indian Station.

India, geographically a nation, and her diversified resources and industries mark her out as an ideal supply center for all points of the Eastern Hemisphere.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

More Than One Way

Many Different Methods By Which Earth Could Be Destroyed

The following article by Waldemar Kaempfert, appeared in the New York Times:

At the Hayden Planetarium in New York are being shown the various ways in which the earth may perish. Planets are like human beings. They are born, they reach maturity and they die. The earth is still young—only two or three billion years old—and it has been calculated that in so far as the sun is concerned, it has 75 billion more years ahead of it.

But the earth could be destroyed by the approaching moon at some remote date. The late George Darwin, Heriot-Park, and Howard Johnson mathematically developed the dread possibility.

The moon was hurled off by the earth. Ultimately the moon will retreat to its course. Already there is a bulge on the moon, a bulge that goes back to the time when the moon was plastic.

South Africa's industries are also one of the great, industrial countries and with the naval authorities in China and East Indian Station.

India, geographically a nation, and her diversified resources and industries mark her out as an ideal supply center for all points of the Eastern Hemisphere.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

India's oil and rubber resources are being developed by her own efforts, and her strategic position in the East makes her a highly important link in the chain of communication.

Air Travel Across The Atlantic By Clipper Route Is Increasing in Volume

Now that the feasibility of flying the Atlantic non-stop between Africa and the northern tip of South America has been demonstrated by the clipper, a rapid expansion is being seen in Western Europe.

The Atlantic Clipper route is a new service, a new era in aviation. It is a service that is being used by many of the world's leading airlines.
